- Student information sorted by period or teacher
- Teacher schedules
- Homeroom teacher and room
- Counselor name
- Locker number and combination
- Attendance details
- Course grade information
- School or district-wide information

Technical Information:

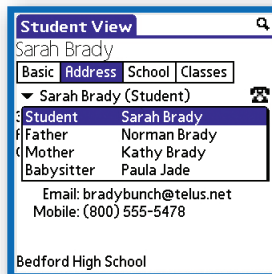

All the data in Principalm is protected with 128-bit encryption

Data easily updated with Principalm Connect

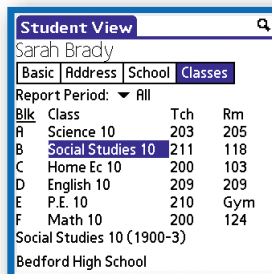

Principalm connects to most student administrative systems and is available for Palm and Windows Mobile PDA devices.

Principalm is the mobile administration system, developed by Discovery Software that allows instant access to student demographic information, schedules, emergency contact information, grades, attendance details and pictures 24/7 even when your Student Information System may be unavailable due to network maintenance or an emergency situation.

Principalm increases student accountability, school security, and is an invaluable tool for loading the most important student information (school or an entire district) onto a handheld for instant data access whenever and wherever it is needed.

Whether you are in the hall or away on a student camping trip, you have easy immediate access to the most important information about each of your students.

Best of all, the data in Principalm is protected with 128-bit encryption. Data is transferred in your building and never leaves your school or district.

Safe, secure and easy to use! Information in the palm of your hand. Principalm is the right solution for your school.
